We are going to look at garden snails.

**Snails like the dark,
damp parts of
gardens.**

**They come out when
it is damp.**

**Snails can go quicker in
the wet.**

Snails look for food when it is dark.

They like fresh, green food.

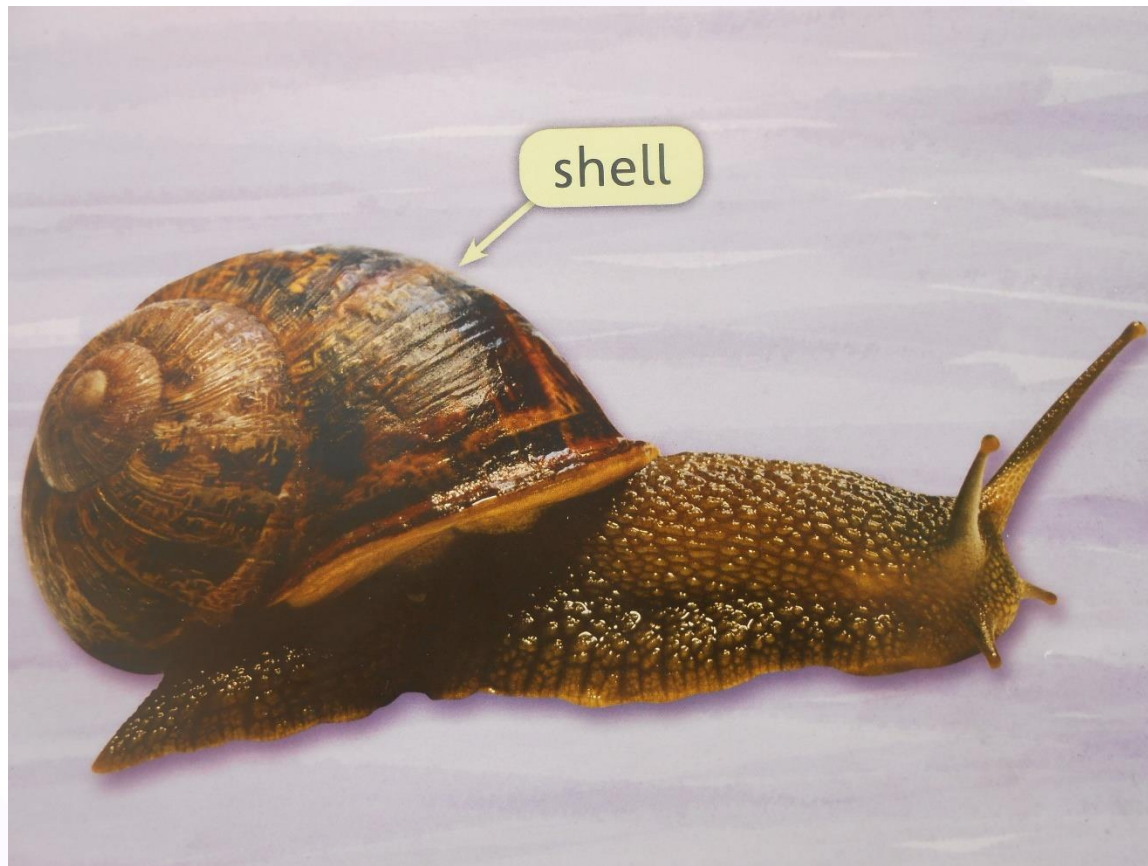

Some snails will have rotting, brown food if they have to.

rotting food

Snails are soft but they have a hard shell.

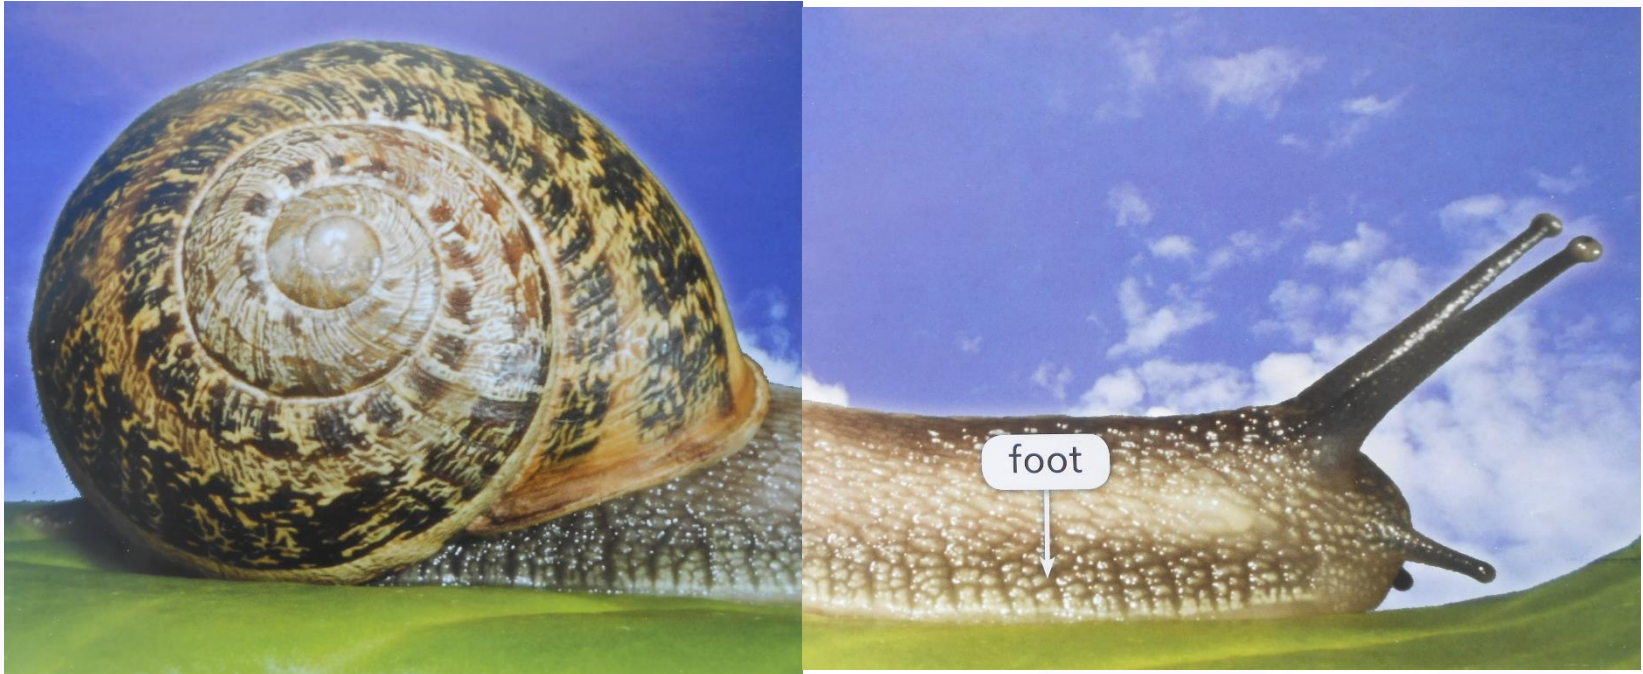

The shell has rings on it.

Snails go into the shell when they think they will be hurt.

Snails do not have legs.

They have one soft, thick foot. It feels damp.

Snails have little feelers to help them feel and smell.

Snails can see out of the top of the long feelers.

Do you think the snail will go quicker on the wood or the carpet?
